

# ERTEC® Environmental Systems

## Better Sediment Control - Half the Cost – ZERO Waste

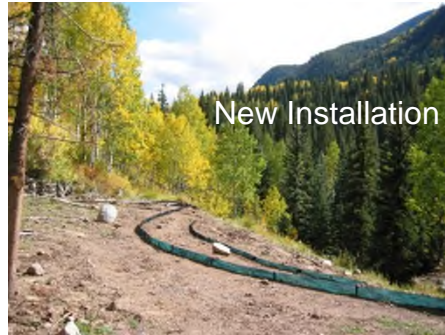

ERTEC offers revolutionary erosion and sediment control products with twice the performance, half the total cost and high resource sustainability.

- DOT approved
- Lower total cost
- Better sediment control
- ZERO WASTE HDPE
  - ✓ Reusable on subsequent projects
  - ✓ Recyclable at the end of life

### PERIMETER PROTECTION

S-Fence™ and ProWattle™ are ideal for Mining and Oil & Gas Operations as a replacement for traditional devices such as silt fence and wattles. Their advantages are significant. They are highly durable and can be reused multiple times over multiple seasons through high winds and deep snow. ProWattle™ is designed to protect slopes, swales & perimeters from erosion and dramatically reduces logistics, installation and maintenance costs. S-Fence™ is designed to replace traditional silt fence. It works differently so it does not need to be as tall. Both ProWattle™ and S-Fence™ are fast to install and unlike straw wattles and silt fence, they spread rather than concentrate flow.

4 Seasons in the White River National Forest (Hope Mine Site), an AML\*. Project is at 8,000 feet 300 inches of snow. S-Fence™ does not decay, blow down, undermine easily, or crush from snow-pack.

CO Department of Mining Safety & Reclamation (DRMS)

Idarado Mine, CO – Newmont Mining Corp  
3 years after install – no maintenance required

#### S-Fence™

As an alternative to silt fence, S-Fence™ does not deteriorate or blow down.

### SLOPE PROTECTION

#### ProWattle™

Alternative to fiber rolls

### DITCH PROTECTION

Arch Coal, CO

#### Ditch Guard™

Alternative to gravel bag, wattle and rock check-dams.

\* Abandoned Mine Lands
